COAL MINE DOUBLES 1938 OUTPUT

PRODUCES 80 CARLOADS DAILY -- Kis Ujsag, No 265, 13 Nov 49

Peak production of the Alberttelep coal mine in 1938 was 40 - 50 carloads daily. At present, average daily production is 80 carloads.

The mines were quite often flooded by rising water levels because of the insufficient pump capacity. By the recent installation of a 1,500-liter pump, the water hazard was eliminated.

Last October the mine did not have any individual work competitor and today there are 67.

MODEL COAL MINE PLANNED -- Szabad Nep, No 269, 19 Nov 49

A model coal mine equipped with the most modern machinery will be established in the vicinity of Kisgyon, near Szekesfehervar. Plans for its construction are in progress and construction of the project will begin this December. It is estimated that in 1951, the model mine will produce about 200 carloads daily.

OZD PLANT IMPROVES STEEL -- Szabad Nep, No 257, 5 Nov 49

Improved quality steel at lower production costs have been made possible in the Ord steel plant by the use of propane-butane gas. The gas is also used in the household as fuel for cooking and for heating the home. Advantages in using the gas are that it is cheaper and gives more heat than other fuels.
